

IN THE ABSTRACT:**ABSTRACT****ASSEMBLY FOR PACKAGING AND DISTRIBUTION OF A PRODUCT**

The present invention relates to an assembly for packaging and distribution of a liquid product comprising:

- a receptacle (~~20; ...; 620~~), intended to contain the product;₁
- a distribution head (~~10; ...; 610~~), fitted to the receptacle, the head comprising at least one nipple (~~40; ...; 440~~) with a distribution orifice (~~42; ...; 642~~) able to communicate with the interior of the receptacle;₂
- a capsule (~~30; ...; 630~~) comprising at least one window (~~39; ...; 639~~) delimited by an edge extending at least in part in a plane (P);₃

the capsule being movable in relation to the nipple between a closed position in which the distribution orifice is at least partly opposite a portion of the capsule extending away from the window and an open position in which the distribution orifice :

- i) is located externally to the capsule, at a ~~distance not equal to zero from said plane (P)~~, and/or
- ii) emerges via a flexible membrane (~~50; ...; 550~~) fitted to ~~said the~~ window, via at least one slit (~~52; ...; 552~~).
